

HP-UX System Administration Part I

Course Overview

The HP-UX System Administration Part I course covers the core issues for administering an HP-UX workstation or server system. The course starts with an introduction to the System Administration Manager (SAM) and progresses to more complex system configuration tasks including kernel configuration, devices, users and the HP-UX filesystem.

On completion of the course, the delegate will have covered all topics considered essential knowledge for part two of the three part HP-UX Certified Administrator exam.

Who should attend

HP-UX administrators who have attended the UNIX Fundamentals course or have equivalent knowledge.

Course Topics

- The System Administration Manager (SAM)
- System start-up and shutdown
- Software and patch management
- Reconfiguring the HP-UX kernel
- Peripheral devices
- HP-UX filesystem and Logical Volume management
- User and group management
- HP-UX processes
- Printing on HP-UX
- Memory and swap management
- System backup and recovery
- Automating jobs
- System performance monitoring
