### HP-UX System Administration Part II

#### Course Overview

The HP-UX System Administration Part II course covers the additional issues for administering a network of HP-UX workstations and server systems. The course starts with an introduction to network terminology and the basic concepts of networking, and then covers in detail a number of popular network services used within HP-UX

On completion of the course, the delegate will have covered all topics considered essential knowledge for part three of the three part HP-UX Certified Administrator exam.

#### Who should attend

HP-UX administrators who have attended the HP-UX System Administration Part I course or have equivalent experience.
